ABSTRACT:

PROBLEM TO BE SOLVED: To facilitate the display of a hidden part and selection for switching the front and rear relation of windows when windows overlap.

SOLUTION: At the time of executing the right click of a mouse when a group of overlapping windows 22 are displayed on a picture 21, a transmission window 24 displaying an image hidden behind a part surrounding a mouse pointer 23 by making the part surrounding the mouse pointer on a window 222 transmissible is generated. At the time of moving the mouse in this state, the transmission window 24 moves by following the mouse pointer 23. At the time of executing the left click of the mouse when the mouse pointer 23 points a window 223, the window 223 is switched to the front side of 222.
